AFFERENCE

AFFERENCE

Feel the Future: Artificial Touch in XR

Get ready to bring touch to the virtual world, delivering unmatched precision and clarity to the virtual experience. Using Afference's CES award-winning ring prototype, infuse your Meta Quest experience with a new dimension of intelligent touch—where every pulse, press, and hover conveys real-time information. Redefine what immersion feels like. From confirming button clicks to guiding slider control or signaling in-game events, design an app that makes players say, "I can actually feel it!" Push the limits of XR, sharpen user awareness, and be part of the sensory revolution transforming how we play, interact, and build immersive worlds.

🏆🏆🏆 Prize 🏆🏆🏆

Best Integration Of Afference Artificial Touch receives a Nintendo Switch 2 and TV!

(One switch for 1st place and one TV for runner-up in 2nd place)

Bonus points

- Multiple types of interactions with touch integration (example: button confirmation, touching an object, giving directions, button hover, creating texture, etc.)
- Creating an entirely new type of interaction with touch we haven't seen before.
- Creativity!
